

**NIE Energy Supply's Response to Consultation Paper SEM-10-041**

NIE Energy Supply (NIEES) welcomes the opportunity to review and comment upon the proposed imperfections charges for 2010-11 put forward in the recent consultation. As with previous years the level of analysis and modelling completed by Eirgrid and SONI is a source of confidence to the market regarding the proposal. NIEES appreciates that the figures provided are an estimate using best endeavours.

We would at this stage question however how the impact of the proposed TALF decision impacts this area and are concerned that this has not been sufficiently considered. NIEES would request that in any decision paper issued the RAs would provide reassurance to the industry on this important issue.
