

25<sup>th</sup> May 2012

Dear Mr. Burke,

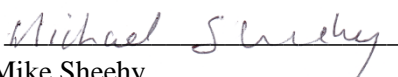

We welcome the opportunity to respond to this consultation on the treatment of Treatment of Curtailment in Tie-Break situations (SEM-12-028).

Pallas Wind Farm are a local Irish owned company. We have 40MW of installed wind farm capacity in Gate 1 and have 13.8MW of wind farm developments ready for financial close and construction in Gate 3.

We are writing to SEM Committee to support the principals of a grandfathering approach with respect to the positive impacts identified in the SEM-12-028 Consultation paper.

In our view a pro-rata approach would retroactively affect the financial viability of our existing wind farm project. Retroactively incorporating curtailments and/or constraints on our existing projects would result in a default of the financial model and would lead to part/full ownership of the farm being transferred from local Irish owners to the national banks.

Yours sincerely,

  
Mike Sheehy  
Director/Secretary
